Test Comments: *The plot emerged well and had good growing conditions through pollination. Ear girth and length showed excellent potential at mid-season. However, a very dry grain fill period reduced kernel size and limited yield. Standability was fair to good. Plant health was generally good with anthracnose evident on some hybrids. Two hybrids were excluded due to severe animal damage in 2 replications.*

† See last page for abbreviation descriptions. Dark colored row identifies the check product found in early- and full-season tests. **Bold** are significantly above test average by LSD(0.10). **Italicized** brands exceed the grain moisture limit for this test. **ns** = column values not significantly different
