Test Comments: *This plot emerged well and had favorable early growth but it was hit with 8" of rain in one event in late June. Stands weren't affected but nitrogen loss was likely and some deficiency was evident later in the season. It then received very limited rainfall in August and September. Grain length and girth were generally good but kernel size was the limiting factor.*

† See last page for abbreviation descriptions. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average by LSD(0.10). **Italicized** brands exceed the grain moisture limit for this test. **ns** = column values not significantly different
